

Impression Series® R.O.

Convenient drinking water down to the molecular level

DRINKING
WATER

The Impression® reverse osmosis drinking water system reduces harmful contaminants* and turns common tap water into fresh, quality water that nature intended. A four-stage system filters water at the molecular level. Drawn water passes through a final carbon filter to remove any unwanted tastes or odors. The result is simply healthier, better tasting water. Units are small enough for under-sink installation or wherever sparkling clean water is desired.

System Benefits:

- Healthy, sparkling clear drinking water
- Better tasting soups, sauces and meals when prepared with R.O. water
- Pristine, flavorful coffee, tea and juice
- Clearer ice cubes
- Environmentally sound water treatment
- Cost effective — the daily cost of bottled water will no longer be a concern
- Convenient — fresh, clean water ready at your tap

*Effectively Reduces
Contaminants in
Drinking Water:*

- Nitrates
- Lead
- Arsenic (pentavalent)
- Cyst (cryptosporidium)
- Fluoride
- Radium 226/228

Impression® R.O. Drinking Water System

Pre-Filter (Sediment/Carbon Block)

- Captures large particles, such as silt, rust or scale
- Contains activated carbon that reduces chlorine particles that can harm the system's membrane
- Extends the life of the R.O. membrane

Membrane

- Traps and removes particles too small for the prefilter to catch
- Microscopic pores allow hydrogen and oxygen molecules (H₂O — water) to pass through
- Flushes dissolved solids and other contaminants out of the system

Final Polishing (Carbon Post-filter)

- Final filtering prior to reaching the tap
- Two carbon filters remove any remaining tastes and odors
- Imparts the final "polish" to your water

Holding Tank

- Stores approximately two gallons of fresh, clean water
- Automatic shut-off

Affordable Drinking Water

The Impression Series® reverse osmosis drinking water system offers a convenient, affordable, environmentally sound alternative to bottled water. This system is designed to filter water at the molecular level to reduce contaminants*, remove odors and improve the appearance and taste of your tap water. Your authorized Water-Right® dealer can help you determine the best R.O. system for your household so you can enjoy better than bottled water, right at the tap.

NSF International Tested and Certified

*The Impression Series T.F.C.-4 R.O. drinking water system is tested and certified by *NSF International* against NSF/ANSI Standard 58 for the reduction of:

- lead
- arsenic (pentavalent)
- copper
- nitrates
- nitrites
- cyst (cryptosporidium)
- chromium (hexavalent)
- chromium (trivalent)
- selenium
- cadmium
- fluoride
- TDS
- radium 226/228
- barium
