

Installation of water treatment outside

7/23/14

To whom it may concern.

Water softeners and filters are able to be installed outside. The combination of sun, wind and rain is not conducive to the longevity of any equipment, but the practice of installing water treatment devices outside is commonplace and nothing in the design of our equipment prohibits the practice.

Ultraviolet light from the sun can prematurely damage the plastic components, but this is true for any objects placed outside. Rain and high humidity are undesirable for the electronics and any additional steps taken to reduce the elements is helpfully but are not mandated by the manufacture. In summary, installing the products we manufacture for outside use is not prohibited, although any steps taken to reduce the elemental effects are suggested for increased longevity.
