## **Product Notice: Discontinuation of 12x48 Media Tanks**

Good Afternoon,

Beginning immediately, Water-Right Group has made the decision to discontinue the use of 12x48 media tanks in all builds and transition to the more consistently available 12x52 tanks. This adjustment follows the recent, industry-wide supply constraints affecting most components in the water treatment industry.

The transition adds four inches to the height of the previous 12x48 offering, but published specifications, including capacities and flow rates, will remain the same. The added height will allow more freeboard space inside the tank which will help improve overall performance for the system.

While this may not necessarily impact a large portion of our customers, the decision to transition to the more industry-standard 12x52 size media tanks allows us to ensure a more steadily available supply of media tanks for customers that use 12-inch tanks in their builds.

As always, we are working hard to provide the best quality parts and components that we can and are dedicated to keeping you informed as changes occur.

Thank you for your understanding,

-The Water-Right Group
