

Resin/Carbon

Advanced technology that treats city water

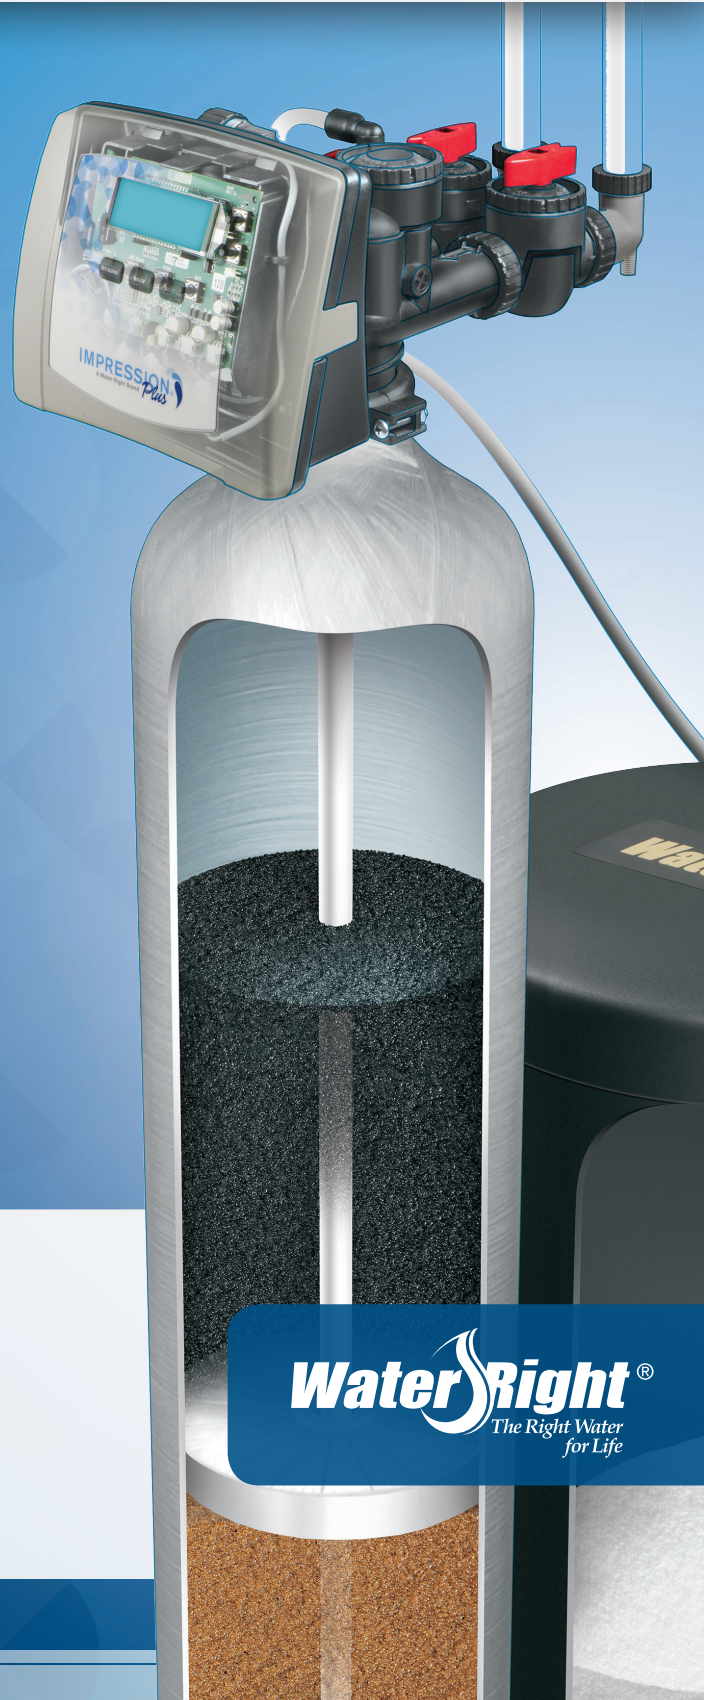

Whether you have municipal water that is hard or chlorinated, Impression Series® RC water softeners deliver the clear, soft, odor-free water you want and need. Its environmentally-friendly tank design eliminates the need for two systems by combining two medias into one tank. The activated carbon reduces chlorine and other unwanted tastes while the high capacity resin softens the water.

A Single System that Treats Municipal Waters

- Hardness reduction
- Reduces chlorine and associated odors
- Softens household water using minimal salt and water
- One system — less service
